

Barrows from the southeast

Barrows from the northwest

Barrows from the northeast during profiling. The Round Barrow is on the right.

The problem with having 51 profiles through an area to give three-dimensional exterior and interior pictures is how to view it in such a way that you can see all the details.

Trying to produce an isometric view with only 12 views through the 'long barrow' is problematic enough using static means, as shown. It is for this reason that we have had to look at dynamic ways of viewing the material, as per the slide show on the screen.

View from the east end of the Long Barrow today from the north to the south looking over the Woolley Valley. The City of Bath and Little Solsbury Hill Camp lie at the southern end of the valley.
